

Supplier Capability Management Platform

The Need for Supplier Qualification

Shippers in air freight transportation are increasingly demanding visibility on the capabilities of their direct and indirect suppliers of logistics services.

The EU Good Distribution Practices (GDP) Guidelines state that parties are always responsible for the activities of their suppliers. Every company must therefore assess the competence of each supplier to ensure that the principles and guidelines GDP are adhered to by the supplier.

For service providers in air freight transportation, this creates increasing challenges:

- ❖ Assessment of supplier capabilities is complex due to a lack of visibility in multi-tier supplier environments.
- ❖ Supplier information is difficult to maintain and share in a global environment with internal and external parties.

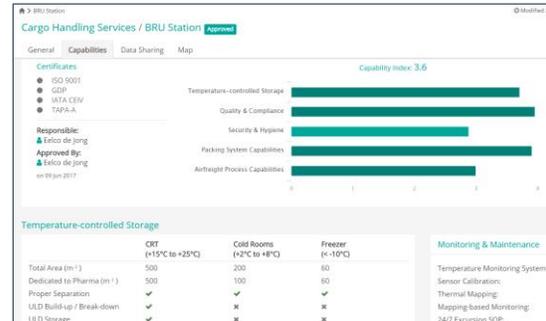

Validaide Capability Management Platform

The Validaide platform offers an innovative solution to manage and share capabilities, specifically focused on the handling of temperature-sensitive products in air freight transportation.

On our platform companies such as Ground Handling Agents, Air Carriers and Forwarders can easily collect, maintain and share their capabilities in a securely manner with their trading partners.

With this solution, Validaide improves supplier capability management by reducing the cost, effort and risk of managing logistics suppliers.

Benefits for Air Carriers

- ❖ **Manage you global handling agent network.** The Validaide platform enables your company to create and maintain a single consolidated view on the capabilities of your global network of handling agents.
- ❖ **Improve operational efficiency.** By creating a single standardized platform, Validaide reduces the growing burden to respond to customer questionnaires for supplier information.
- ❖ **Ensure compliance and mitigate risk.** The Validaide platform is designed to ensure compliance with GDP regulations for supplier qualification and helps to mitigate supplier risk.

Benefits for Ground Handling Agents

- ❖ **Control access to your information.** Your company owns the capability information related to your station network, and provides control with whom this data is shared.
- ❖ **Demonstrate station capabilities.** Demonstrate the capabilities of individual stations to the industry and ensure your investments in healthcare handling are recognized.
- ❖ **Ensure regulatory compliance** – The Validaide Standard Capabilities Checklist helps to ensure your company complies to regulatory requirements.
